## Cloudflare MSSP – New opportunities, better margins

As an MSSP, you can now offer the cloud-based security portfolio of Cloudflare as a service.

Cloudflare MSSP is a flexible and scalable solution that makes it easy for you to further develop your security offering to customers and build even stronger relationships.

In this PDF, we have gathered the information you need to get started.

### Cloudflare MSSP “ZTNA”:

Features	Essentials (1)	Advanced (2)	Premier (3)
Gateway (WARP, mTLS)	x	x	x
Access (Tunnel, WARP, mTLS)	x	x	x
CASB (Cloud Access Security Broker)		x	x
DLP (Data Loss Prevention)		x	x
RBI (Remote Browser Isolation)			x
Email Security	*included in the Plus package	*included in the Plus package	*included in the Plus package
Email Security w/ PhishGuard			*included in the Plus package

#### 1) Zero Trust Essentials:

Provides your users with basic Zero Trust protection with:

- Secure access to internal systems and applications (ZTNA)
- Secure access to the internet (SWG)
- Secure use of cloud services and SaaS

The solution protects against threats in real time and works both with and without a client.

Built on Cloudflare Access and Cloudflare Gateway with support for Cloudflare WARP, Cloudflare Tunnel and mTLS.

#### 2) Zero Trust Advanced:

Provides a more comprehensive Zero Trust security level. In addition to the features included in Essentials, you also get:

- Advanced control and monitoring of SaaS and cloud services (Multi-Mode CASB)
- Data protection and prevention of data leaks (DLP)

The solution protects against threats in real time and works both with and without a client.

Built on Cloudflare Access and Cloudflare Gateway with support for Cloudflare WARP, Cloudflare Tunnel and mTLS.

#### 3) Zero Trust Premier:

Provides a complete and full-featured Zero Trust protection level. In addition to Essentials and Advanced, you also get:

- Remote Browser Isolation – isolates web content for safer browsing

The solution protects against threats in real time and works both with and without a client.

Built on Cloudflare Remote Browser Isolation, Cloudflare Access, Cloudflare Gateway, Cloudflare CASB and Cloudflare DLP, with support for Cloudflare WARP, Cloudflare Tunnel and mTLS.

#### \*Plus package

- Essentials Plus and Advanced Plus include email security.
- Premier Plus includes email security and phishing monitoring from Cloudflare.

## Cloudflare MSSP “Application Services”:

### Cloudflare Application Services Business

A service that protects your website and online store against threats while ensuring high performance and availability — wherever your users are located.

The service combines:

- Protection against DDoS attacks
- Secure DNS management that protects your domain
- Web Application Firewall (WAF), including OWASP rules, that blocks malicious traffic and attacks against web applications
  - All rules are created and managed by Cloudflare
- Offloads the web server by delivering files, images, and videos closer to users (CDN)
- Certificate management: Automatic handling of certificates for web applications and domains included in the service
- Logging: Receive logs and forward them to an external SIEM or similar system

Application Services	Business
DNS (Domain Name Service)	x
CDN (Content Delivery Network)	x
WAF (Web Application Firewall)	x
DDoS Protection (Distributed Denial-of-Service)	x
Certificate Management	x
Logging (Logpull, Logpush)	x
